is blocking your ip address illegal

I was referring to my particular situation while on site My logic and what I stated was, that some people/agents who have some control of their web sites, can if they choose to, identify your particular computer IP address.. Borrow a different IP address to go anywhere online and stay hidden There are a few ways to hide your IP address.. I am also not sure what you mean, when you say you should be more worried about malware when visiting such places..
